4

1) Knowledge of approaches (each point out of 2):

1. Use the tools of the lab such as laptops supported by required software.
2. Understand more about using both input / output computer instructions.

2) Knowledge of data collection methods (each point out of 2):

1. PC for writing document.
2. Required software programs (Microsoft word and XL).

3) Experience (each point out of 1):

1. Setting up User Account.
2. The students know how to properly Write a document in Microsoft word and analyze data by XL program.

4) Ability to analyze and interpret data (each point out of 4):

- Solving the Discussion questions of the experiment.

Objectives:

MS Office (word, Excel, Power point, outlook) Starting each program and identify the main screen in details as title bar, main ribbons, etc.

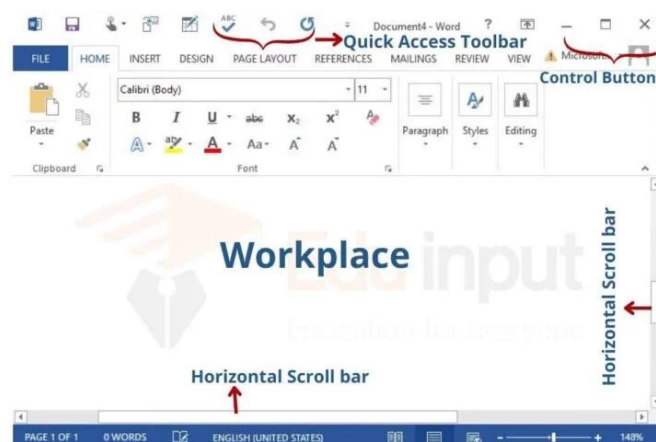

Theory:

Microsoft Word is a widely used word processing software that offers various

Features for creating, editing, and formatting documents. Here are some points we could discuss: Features and Capabilities: Microsoft Word provides a plethora of features including text formatting, spell check, grammar check, page layout options, tables, images, charts, and more. It also offers collaboration tools like track changes and comments. Compatibility: Word documents are compatible with various platforms, including Windows, macOS, iOS, and Android. Additionally, Word supports integration with other Microsoft Office products like Excel and PowerPoint. Templates: Word offers a wide range of templates for different types of documents such as resumes, letters, reports, and newsletters. These templates can save time and effort in document creation. Integration with Cloud Services: Microsoft Word integrates seamlessly with cloud storage services like OneDrive, allowing users to access and edit their documents from anywhere with an internet connection. Advanced Features: In addition to basic editing and formatting options, Word includes advanced features such as mail merge, macros, and the ability to create complex documents like long reports and books. Accessibility:

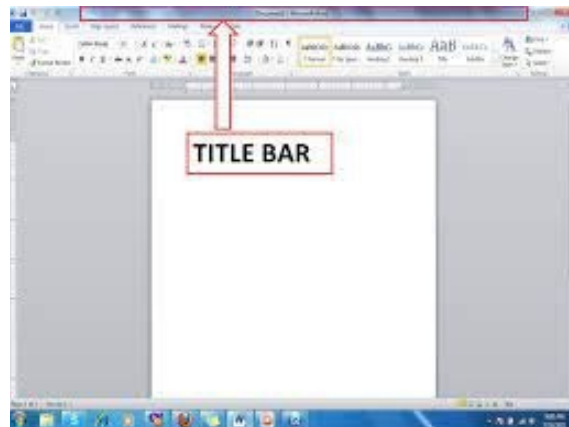

Microsoft Word offers accessibility features like screen reader compatibility, keyboard shortcuts, and alternative text for images, making it usable for people with disabilities. Updates and Support: Microsoft regularly updates Word with new features and security patches. Users also have access to support resources such as tutorials, forums, and help documentation.

MS Word window Interface

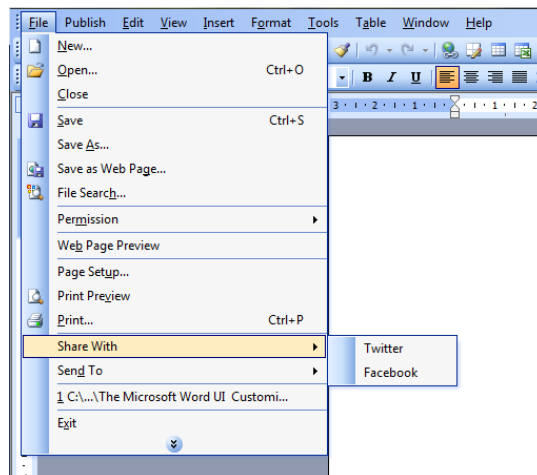

Title Bar

The title bar contains the title of the current document. It is located at the top of the document.

Menu Bar

The menu bar contains different tabs like (Home, Insert, Design, Page Layout, Reference, Mailing, View, and Review...). The Home tab contains different items like alignment, font (style, size, color, etc), and many more. Each tab has its different functions.

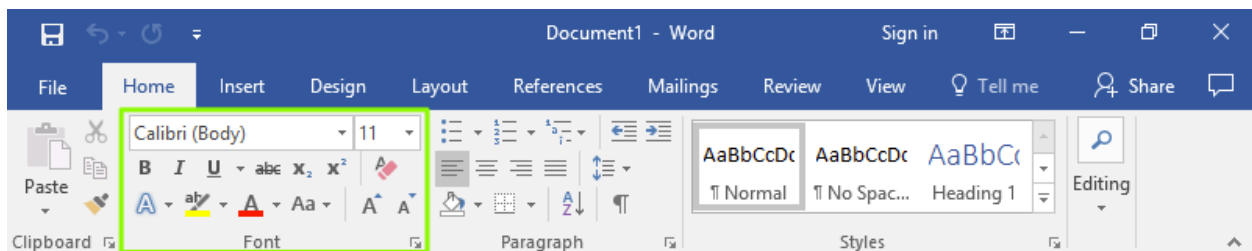

Fonts

The appearance of text in the document is called font or typeface. Fonts are used to make text of different styles and sizes.

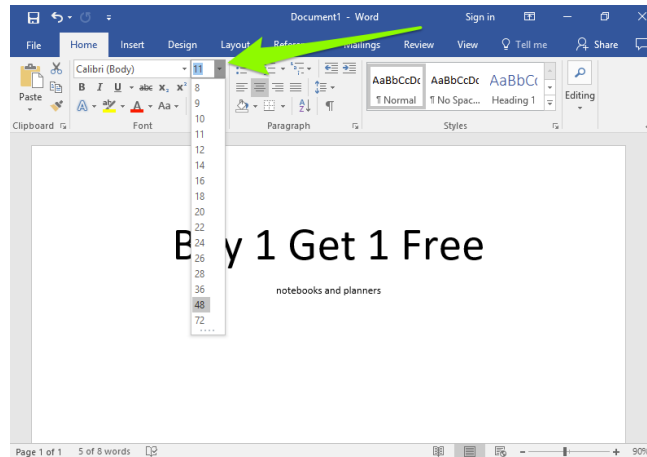

Font size: Font size can be set from the formatting toolbar. Font size is measured in points. A common font size used in business documents is 82-points types.

Font style: Font style is used to make the text bold, italicize, and underline the text formatting toolbar contains a separate button for all of these options.

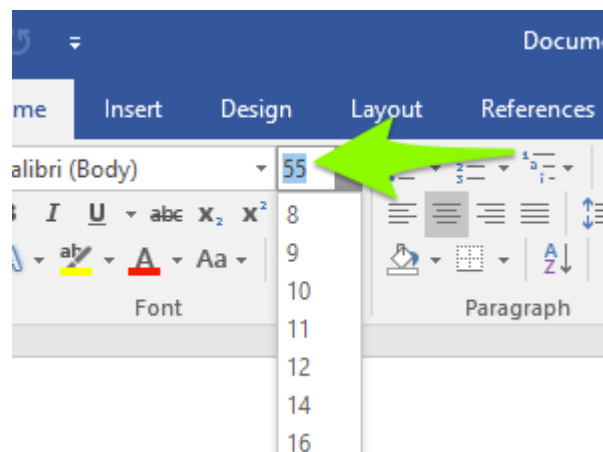

Font color: Font color option is used to change the color of the text.

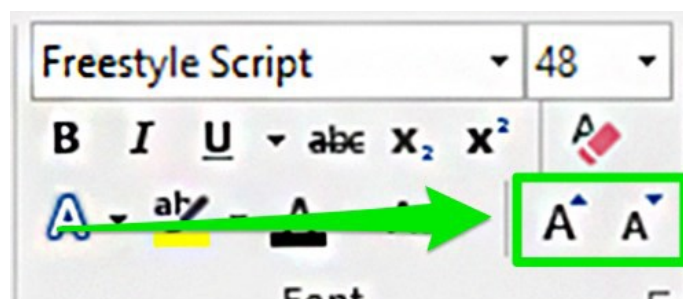

To change the font size in Word, go to the Home tab and click on the dropdown menu for the number in the font ribbon. You can pick a number and then start typing in that size. For a preview, select the text you want to change, then open the font size dropdown menu and hover your cursor over each number to see the text change. Finalize that size change by clicking the size number.

You can also choose a custom size by typing a number and hitting enter.

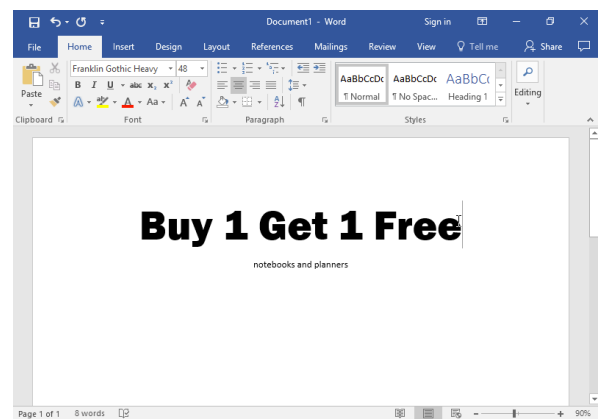

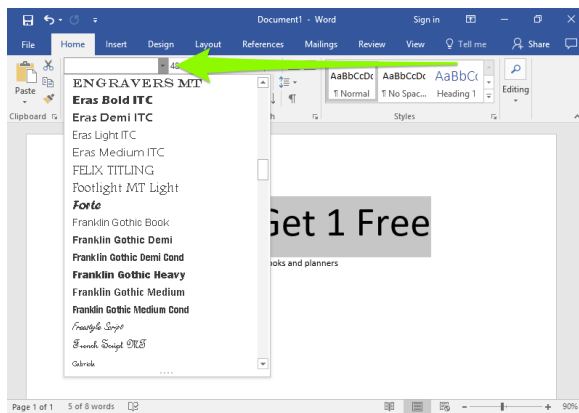

You can also increase or decrease the font size by clicking the Increase Font Size and Decrease Font Size buttons.

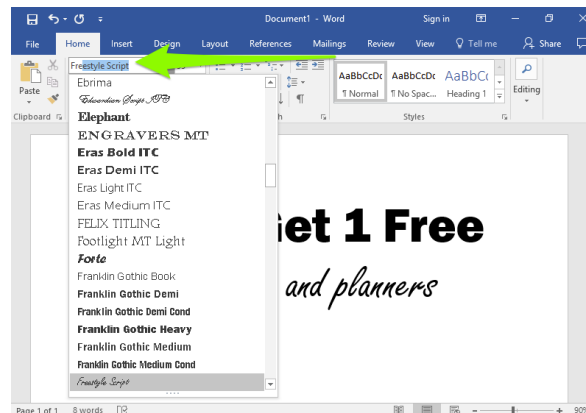

Font styling:

The font changes the styling of letters in your text. The menu for changing the font is in the Home tab near the top-left corner. Like the font size menu, hovering your mouse over each font option will change selected text so you can see a preview of what each font looks like

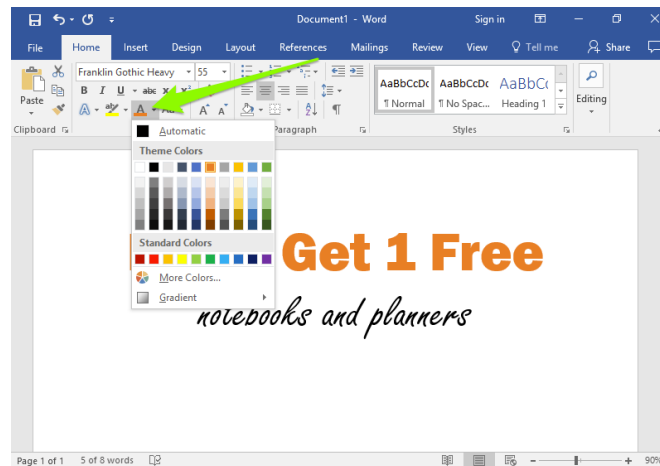

If you already know what font you want, you can start typing the name to skip to it in the menu.

Font Color

What's life without a little color? Select the text you want to change, then click the font color dropdown menu, which will give you a wide array of colors to choose from.

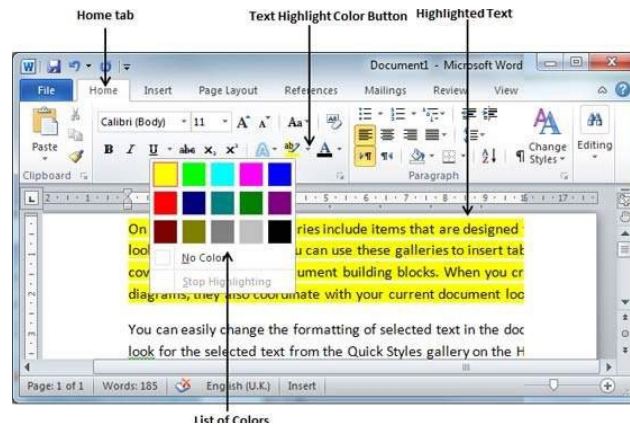

Highlight Text with Colors:

You can highlight a selected portion of text using any color and it will look like it was marked with a highlighter pen. Usually we highlight a text using yellow color. It is very simple to highlight a portion of text with a color by following two simple steps

Step 1 – Select the portion of text that needs to be highlighted with color. You can use any of the text selection method to select the portion of text.

Step 2 – Click the **Text Highlight Color** button triangle to display a list of colors. Try to move your mouse pointer over different colors and you will see the text color changes automatically. You can select any of the colors available by simply clicking over it.

If you click at the left portion of the **Text Highlight Color** button, then the selected color gets applied to the portion of text automatically; you need to click over the small triangle to display a list of colors.

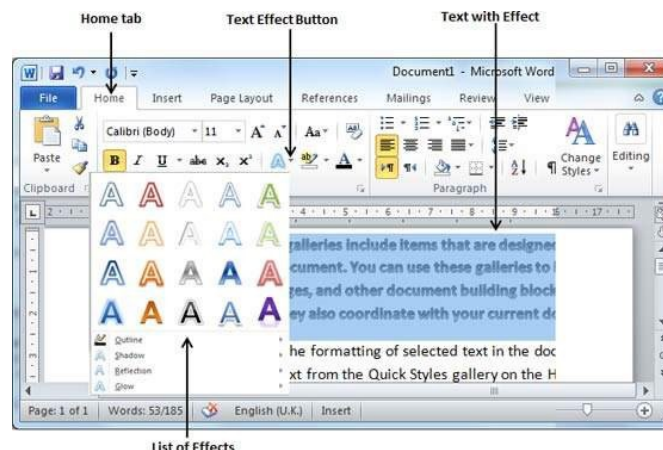

Apply Text Effects

Microsoft word provides a list of text effect which add to the beauty of your document, especially to the cover page or the headings of the document. This is very simple to apply various text effects by following two simple steps:

Step 1 – Select the portion of text that you want to change to a bold font. You can use any of the text selection method to select the portion of text.

Step 2 – Click the **Text Effect** button to display a list of effects including shadow, outline, glow, reflection etc. Try to move your mouse pointer over different effects and you will see the text effect will change automatically. You can select any of the text effect available by simply clicking over it.

Assessment

Computer / 1st Level / 1st Semester / 2025-2026

Mrs. Noor Mowafeq and Shayma Nazar

GO3:

“An ability to create and carry out proper measurement and tests with quality assurance, analyze and interpret results and utilize engineering judgment to make inferences.”

Performance Indicators with Rubrics

	4-Exceed	3-Meet	2-Progressing	1-Below
Creation of LAB Environment	Can specify all the requirements correctly	Can specify most of the requirements correctly	Can specify few requirements correctly	Can not specify any requirement
Specifying the Measurement Tools	Can specify all the required measuring tools correctly	Can specify most of the required measuring tools correctly	Can specify some of the required measuring tools correctly	Can not specify any required measuring tools correctly
Result	Can clarify how to	Can clarify how	Can clarify how	Can not

Interpretation	show and interpret the results using different tools	to show and interpret the results using one tool	to show but not interpret the results using suit's tools	clarify how to show and interpret the results

The Problem

Q1) what are the main parts of the computer desktop.

A)The wallpaper

The application icons

The searchbar

The start window

Q2) write the steps for the following operation: create new folder on the desktop naming it (first level) then make a copy from it in the partition d:

A)

Right click on the desktop → press New → choose folder → right click on the new folder → rename it to (First level) → right click on it again and press copy → go to partition D: → paste

Q3) Write the best resolution of the monitor.

A)

1980 x 1080 also known as FHD

3840 x 2160 also known as UHD
